Toggle Switch

Shoulder Strap for ease of carrying and handling

Telescopic detachable and folding handle bar

15 Ft power-cord through handle bar

UVC germicidal light is effective at disrupting the cellular membrane of the microorganism causing irreparable damage to the DNA resulting in the sterilization of the microorganism.

Traditional disinfection systems are effective but require multiple positioning within a space to lessen the chances of "shadow area" which block the sterilizing ability of the UVC light. In doing so, time and resources are spent repositioning the system around and in some cases preparing the area for additional treatment.

**S-WAND provides on-the-spot disinfection in minutes!**

*Minutes to 99.9999 disinfection for Clostridium difficile*

Take it anywhere, use it in any unoccupied space

Irradiate as needed any spot or surface area

Tested to show >99.9999% reduction of Clostridium difficile, VRE & MRSA
